Attention is given to attacking situations, with players being given the ability to express creativity and express their style on the pitch through active decisions such as players being able to pass or shoot and where they are and where they should be on the pitch. Players will no longer find it easy to be surrounded by a number of opponents; all players will know the danger of being surrounded by many opponents, due to an increase in intelligent AI and player movement. The ball will now bounce and roll differently, based on different surfaces, with players being able to masterfully control the ball to create goal-scoring opportunities. Players will also have the ability to pre-empt opponents with a "Reverse Sink Tackle", where the ball is controlled by players on the pitch and inverted in an attempt to disrupt an opponent on the attack. Fifa 22 Serial Key introduces a more responsive and balanced referee system that rewards consistently good match play. When the referee starts the game, the pre-match preparation will be shown to the referee, which will allow them to prepare accordingly to the conditions of the match. Similarly, when goals are scored, the name of the player who scored the goal will be shown to the referee, so that they can keep track of who is responsible for a goal. The referee will also be able to see the player who is clearly causing an issue for the team, to prevent any conflict. The "Referee Decision Editor" will be revealed to the referee in certain situations. This can either be related to the FIFA Ultimate Team mode, such as the "Tap to Boost" option. The referee can decide when they think a tap on the touchline is intentional or not, if a foul is committed, or even if a player is in the right for a decision. Fifa 22 Product Key introduces a new "Goalkeeper Deflection" mechanic. A goalkeeper will be able to make an intuitive save by defending the ball by throwing a body part to manipulate the ball towards an open area, or even check from their keeper position. Players will also be able to use the goalkeeper to move backwards or forwards on the pitch, while the goalkeeper does not take a step or is falling backwards, to generate more time and space. The goalkeeper will also be able to perform the "Bravado" action, where he will perform a short lunge, with
